Nucleotides
Unless other information is stated in the index entry, the following can be assumed: the nucleotide is mono, the sugar is ribose, the phosphorus acid is esterified at the 5'-position of a mononucleotide, and the phosphorus acid moiety is [mono]phosphate. In addition, 2'-deoxy can be assumed for deoxyribonucleotides, (3'->5')-linkages containing [mono]phosphate groups can be assumed for oligo- and polynucleotides, and (3'->5')-[mono]phosphates can be assumed for cyclic nucleotides. When known, the number, type, and position of nonlinking and linking phosphorus acid groups are indicated in the index entry
